### DETAILED ACTION

Applicant's election without traverse of group I, claims **1-25** (drawn to semiconductor device), in Paper No. 3 filed October 26, 2000 is acknowledged.

### *Election/Restrictions*

1. The elected claims, 1-25, directed to the following patentably distinct species of the claimed invention:

Embodiment 1 of Figures 2-6 drawn to an electronic component with a planar substrate; a cap having a non-planar inside surface; an electrically conductive material (electrically coupled the first and the third bond pads) and an adhesive material (forming a seal between the cap and the substrate) having different height.

Embodiment 2 of Figures 7-19 drawn to an electronic component with a planar substrate; a cap having a non-planar inside surface; an electrically conductive material (electrically coupled the first and the third bond pads) and an adhesive material (forming a seal between the cap and the substrate) having similar height.

Embodiment 3 of Figures 11-14 drawn to an electronic component with a planar substrate; a cap having a non-planar inside surface; an electrically conductive material (electrically coupled the first and the third bond pads) and an

adhesive material (forming a seal between the cap and the substrate) having similar height and being unitary piece of material.

Embodiment 4 of Figures 15-18 drawn to an electronic component with a non-planar substrate; a cap having a planar inside surface; an electrically conductive material (electrically coupled the first and the third bond pads) and an adhesive material (forming a seal between the cap and the substrate) having similar height.

Embodiment 5 of Figures 19-22 drawn to an electronic component with a planar substrate; a cap having a planar inside surface; an electrically conductive material (electrically coupled the first and the third bond pads) and an adhesive material (forming a seal between the cap and the substrate) having similar height.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 17 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Luan Thai whose telephone number is (703) 308-1211. The examiner can normally be reached on 7:00 AM - 3:00 PM.
